

Camex limited is a leading supplier of specialty chemicals, delivering high quality solutions across plastics, textiles, dyestuffs, and glass fiber industries.

About Us

Camex Limited, a Public Listed Company, established in the year 1989 & headquartered in Ahmedabad, India, is a reputed and progressive organization engaged in the manufacturing and export of a diverse range of products including Dyestuffs, Textile Auxiliaries, Plastic Chemicals, Glass Fiber, Specialty & Textile Chemicals, and Pigment Dispersions.

Camex operates on the foundational pillars of ethical business practices, continuous innovation, technological advancement, and environmental sustainability. With a customer-centric approach, the company constantly strives to exceed industry benchmarks and establish market leadership in its areas of operation.

Camex's journey is marked by significant milestones and recognitions that underscore its credibility and excellence as a manufacturer and exporter. These accolades serve as a testament to its unwavering commitment to quality, compliance, and customer satisfaction.

Camex offers a diversified range of specialty chemicals designed to meet the evolving requirements of multiple industries. Our products are known for consistent quality, application reliability, and performance stability

Reactive dyes

With our impressive compositions of fineness, Camex aims to manufacture the best range of reactive dyestuff for the textile industry. We produce a range of dyestuffs mainly used to dye cotton and viscose, but they are also gaining influence in wool and polyamide. There are a wide variety of reactive dyes available and a number of dyeing techniques can be used with them.

Acid dyes

Camex provides a wide range of acid dyes that are used to dye natural proteins (wool and silk), synthetic polyamides (nylon), and, to a lesser extent, acrylics.

Direct dyes

Camex is one of the few dyestuff manufacturers in India, offering direct dyes that are typically used for dyeing cotton, paper, and leather. They are used as pH indicators as well as biological stains. Besides curtains, carpets, furniture, and furnishing, direct dyes are used in low-cost viscose and blended fabrics.

Textile Auxillaries

We offer solutions for the wet processing of textiles to improve their performance and final product aesthetic effects using leading technologies and high-performance ingredients.

These textile auxiliaries and specialty chemicals are used to improve textile product applications, process quality, save time, and create specialized finishes. Starting with pre-treatment and ending with washing, Camex offers a wide range of textile auxiliaries.

BIO SCOUR CL

Eco Green Scouring
Agents for Cotton

CAMERON SRF

Eco Green Alkali for
Fixation Reactive Dyeing

CAMATHICK CME CONS

QUALITY & SUSTAINABILITY

Quality is the feature that distinguishes the best from the rest. At Camex, we continually strive to create superior-quality dyes and state-of-the-art PVC additives. As an ISO 9001 & 14001 certified company, we ensure that every process is seamlessly integrated in accordance with established international standards.

Quality Attributes:

- Fully equipped QC laboratory with modern instruments
- Continuous testing for product performance and safety
- Compliance with international standards

Sustainability:

We practice responsible production, waste minimisation, recycling and environmentally conscious operations as part of our core values.

AWARDS, ACHIEVEMENTS & CERTIFICATIONS

Camex has consistently demonstrated excellence in manufacturing, exports, and innovation in the specialty chemicals sector. Recognized as a Star Export House, we have earned accolades from industry associations and international partners for our outstanding performance in quality, operational efficiency, and global outreach. Over the years, our commitment to innovation, sustainability, and customer satisfaction has positioned Camex as a trusted partner across multiple industries, reflecting our dedication to setting high standards and achieving continual growth.
